

Eagle Tree Systems Hardware Upgrade Information

In an effort to help you get the most from your Eagle Tree investment, we are offering upgrade options from our previously available systems, to support our latest sensors and features.

To obtain an upgrade, first determine the firmware version of your recorder. This is done by connecting the recorder to USB, and choosing “Hardware, Firmware Control.” This will list the recorder firmware version. If the software that came with your recorder does not have the “Hardware” menu option, you can click “Tools, Firmware Control” or “Help” to list the firmware version.

Or, if you are having trouble determining the firmware version, please open a web ticket as described below, and we will help you.

Note that more than one piece of hardware may need to be upgraded for complete feature support. For Example, if you have a Seagull Flight system manufactured before 2006, and want full GPS support, you would need to upgrade your Flight Data Recorder, your Seagull Dashboard, and your Seagull Transmitter.

When you are ready to return your hardware, please open a support web ticket at <http://ticket.eagletreesystems.com>, and we will send you a Returned Merchandise Authorization for the hardware upgrade, and let you know the cost of the upgrade, including return shipping.

From	To	Cost
eLogger V1/ V2	eLogger V3 (no return of eLogger V1/V2 needed)	\$62.99
Flight Data Recorder V2	Flight Data Recorder V2 with GPS Support	
Firmware version 4.10 or greater		No Upgrade Needed
