

Press Release – December, 2006

Stall Speed Indicator from Eagle Tree Systems, LLC

Why risk your multi-thousand investment on a bad landing? Eagle Tree Systems is pleased to announce the release of the variable beep rate Stall Speed indicator feature for our Seagull Pro telemetry systems. This feature is ideal for jets and other planes that are stall-prone during landing.

To use the Stall Speed feature, just download our latest software from the website, update your firmware, configure the stall speed trigger, and you are ready to go! Once configured, the Seagull Wireless Dashboard will begin a slow beep when the trigger speed is reached, and will begin beeping more rapidly as your speed decreases.

If you don't yet have our Seagull Pro telemetry system, see your dealer, or order directly from us if there is not a dealer near you. We now have support for reading key Jet ECU parameters from JetCat, AMT and Fadec based turbines!

See your Dealer, visit our site at <http://www.eagletreesystems.com> or email sales@eagletreesystems.com for more information.
